Vegetable grafting: a boon to vegetable growers to combat ... tion of many fruit-bearing vegetables which include watermelon, cucumber, melon, tomato, eggplant and pepper, grafted seedlings were used. These seedlings besides providing resistance against biotic/abiotic stresses, increase the yield of the cultivars. Vegetable Gardening In The Tropics - Crop Planting In ... Sustainable vegetable gardening is the name of the game and working with the natural temperatures and humidity of a tropical climate rather than against it. Tomatoes will grow in the tropics, but plant them during the winter or dry season, not the rainy season. Managing Pests | Vegetable Resources Most vegetable crops are shallow rooted having their roots concentrated in the top 12" of the soil. As a result, maximum cultivation depth should be no greater than two inches. Deeper cultivation will cause roots system disruption, plant injury and even death.
